

26. Insert Watermark to the Image Using OpenCV

Aim

To insert a **watermark** into an image using OpenCV in Python.

Procedure

1. Read the input image using OpenCV.
2. Check whether the image is loaded successfully.
3. Define the watermark text.
4. Select the font, position, size, and color of the watermark.
5. Use `cv2.putText()` to insert the watermark.
6. Save the watermarked image.
7. Display the original and watermarked images.

Program

```
import cv2

# Read the input image

img = cv2.imread("input.jpg")

# Check whether image is loaded

if img is None:

    print("Error: Image not found")

    exit()
```

```
# Watermark text
```

```
watermark = "MY WATERMARK"
```

```
# Set font
```

```
font = cv2.FONT_HERSHEY_SIMPLEX
```

```
# Position of watermark
```

```
position = (50, 50)
```

```
# Font size
```

```
font_scale = 1
```

```
# Color: White
```

```
color = (255, 255, 255)
```

```
# Thickness
```

```
thickness = 2
```

```
# Insert watermark
```

```
cv2.putText(img, watermark, position,  
            font, font_scale, color, thickness,  
            cv2.LINE_AA)
```

```
# Save watermarked image
```

```
cv2.imwrite("watermarked_image.jpg", img)
```

```
# Display image
```

```
cv2.imshow("Watermarked Image", img)
```

```
cv2.waitKey(0)
```

```
cv2.destroyAllWindows()
```

Input

Output:

Result

The watermark was successfully inserted into the input image using **OpenCV**.

The watermarked image was displayed and saved successfully.
